

# Sea Creatures

Year R had some visitors from Blue Reef Aquarium.

We had some rock pool creatures brought to our school, which we got to touch and learn lots of facts about. We talked after the visit about all the facts that we learnt before writing down the facts about one of the creatures.

We learnt a spider crab is one of the only crabs that can move forwards and backwards and not just side to side.

We also got to look at a Shore Crab.

The shore crab we saw was a boy. We learnt that male shore crabs had a rocket shaped marking on its tummy where as females had a pouch where it holds babies.

The other creature we got to learn about was a star fish. The star fish had hard bumps over its soft, jelly like skin, we loved feeling the different parts. We had to be careful not to touch the eyes though. We learnt jelly fish have an eye at the end of each of it's legs and they can have over 20 legs.
