

Ladybird's Grounds

Week Autumn 2018

We went on a bug hunt! Our science investigation was to find out where insects like to live! This is called their habitat!

We made predictions and then went to investigate in the woods. We used equipment called pooters to collect insects so we could look at them closely.

We looked at them closely with magnifiers. We learnt that all insects have 6 legs and a head, thorax and abdomen. We also found that most insects live under bark or leaves because they like the dark and damp.
