

Grounds Week Madness!

This week in grounds week Foxes and Hedgehogs have been scientists... Their mission has been to delve deeper into their science topic of Earth and Space. To do this they have been making homemade rockets. Now you cant make a rocket without launching it! Foxes and Hedgehogs designed an experiment to test what would happen when they added different amounts of bicarbonate soda to vinegar. To test this they timed how long each of their rockets were in the air for. Unfortunately we found that some of our testing wasn't fair resulting in inconclusive results. However, this just means we get to repeat the experiment!

#scientistsneverquit!
