

Hedgehogs Grounds Week

Summer

This grounds week, we went up to the woods, as part of our science life-cycle topic. We dissected flowers to investigate the different parts of a flower and how they worked. Using this inspiration, we then designed our own flowers and used pointillism to paint them.

We also designed parachutes to help the "Save the Rainforest" team. We thought carefully about the materials we needed to use and investigated the area of the parachute and how this affected the air-resistance. We then tested these and found out that the weather was also another variable that we affected our findings.
