

Dragonflies Grounds Week

During grounds week, Dragonflies class took their maths lessons outside and used the school grounds to help us with our learning. We learnt about 3D shapes, angles, Venn diagrams and used nature to help us with learning our times tables.

Children were asked to collect items that they found in the woods and bring them back to class. They were then given 2 circles to create Venn diagrams with what they found in the woods.

We also looked at leaves and how they could help us learn our times tables. The children explored outside looking at different leaves then created their own posters to show their times tables using nature.
